

**SOUTHWEST ELECTRIC COOPERATIVE, INC.**  
**MEMBER GENERATOR SYSTEM ADDITIONAL CAPACITY INTERCONNECTION NOTICE**

This Member-Generator System Additional Capacity Interconnection Notice is made pursuant to the terms and conditions of that certain Application and Agreement for Interconnection and Net Metering of Systems with Capacity of 100 kw or Less between Southwest Electric Cooperative (“Co-op”) and \_\_\_\_\_, the Member-Generator dated \_\_\_\_\_ (“Initial Agreement”). Member-Generator hereby provides notice to Co-op of Member-Generator’s installation of \_\_\_\_\_ kW of additional capacity to the system installed pursuant to the Initial Agreement.

**G. Pre-Construction Certification**

I, \_\_\_\_\_ (print name), the undersigned, a professional electrician or professional engineer (please circle one) do hereby certify that:

The Member-Generator's proposed additional System hardware complies with all applicable National Electrical Safety Code (NESC), National Electric Code (NEC), Institute of Electrical and Electronics

Engineers (IEEE) and Underwriters Laboratories (UL) requirements for electrical equipment and their installation. As applicable to System type, these requirements include, but are not limited to, UL 1741, IEEE 9292000, and IEEE 1547-2003. The proposed installation complies with all applicable state regulations, local electrical codes and all reasonable safety requirements of Cooperative.

The Member-Generator's proposed System has functioning controls as specified by IEEE and UL standards, including, but not limited to control to prevent voltage flicker, DC injection, over voltage, undervoltage, over frequency, under frequency, and overcurrent, and to provide for System synchronization to Cooperative's electrical system. The proposed System does have an anti-islanding function that prevents the generator from continuing to supply power when Cooperative's electric system is not energized or operating normally. If the proposed System is designed to provide uninterruptible power to critical loads, either through energy storage or back-up generation, the proposed System includes a parallel blocking scheme for this backup source that prevents any backflow of power to Cooperative's electrical system when the electrical system is not energized or not operating normally.

**H. Post-Construction Certification**

I, \_\_\_\_\_ (print name), the undersigned, a professional electrician or professional engineer (please circle one) do hereby certify that the additions to the Member-Generator's System referenced herein and now fully constructed satisfies all requirements noted in Section G, as set forth above.
